

ABSTRACT

The invention provides an electronic apparatus that provides an organic electro luminescent device and a liquid crystal device. In a mobile terminal electronic apparatus such as an electronic apparatus having a device for displaying, and in particular, a mobile telephone that has power consumption restrictions, provides an organic electro luminescent device, which makes possible fine display having superior visibility, and a transfective or reflective liquid crystal display device, which severely reduces power consumption, and thereby allows achieving low power consumption while not in use, and allows selective use of displays depending on the type of information, such as video or still images, and the condition of the remaining battery charge, or the like.
